SUBJECT:

BIRTH WEIGHT/LENGTH

RESEARCHER:

National Organization of Mothers of Twins Clubs, Inc.

DATE:

1985

This survey by the Research Department of NOMOTC sought to either substantiate or refute the claim that the larger twin is born first.

The questions asked were whether twins were identical, fraternal or unknown, weight at birth of first born and second born, and length of first born and second born.

Over 300 responses showed that there was no correlation between birth order and birth size. The largest twin weighed over 10 pounds and the smallest was under two pounds.
